PROFESSIONAL EXPERIENCE

Coinbase

Software Engineer

Mar 2025 – Present

Bengaluru, India

- Engineered an automated gRPC diff testing framework to validate APIs between staging and production environments, proactively catching over **531** breaking changes and reducing production incidents by **30%** across Coinbase in 2025.
- Developed a QA AI agent which reduced **40%** cost spent on external QA service providers.

Walmart Global Tech India

Software Engineer 3

Jul 2021 – Mar 2025

Bengaluru, India

- Designed an End-to-End Ordering System for Walmart Store Remodels, achieving cost savings of approximately **\$27M** annually for international operations.
- Built a generic search framework to search by any column on any table in MSSQL Server.
- Implemented Auto Secret Rotation for MSSQL servers, saving **15 days** of manual effort per team annually.
- Reduced approximately **10 minutes** of downtime per microservice annually by eliminating the need for application restarts during configuration and secret changes, ensuring continuous service availability.
- Received Annual Excellence Award twice (2022 and 2025) for mentoring engineers and significant contributions to customers.

Walmart Global Tech India

Software Engineer Intern

Jan 2021 – Jun 2021

Bengaluru, India

- Developed and optimized Apache Spark jobs for large-scale data processing on Google Cloud Dataproc clusters.
- Collaborated with distributed cross-functional teams to implement ETL workflows for business-critical analytics.

EDUCATION

PES University

B.Tech in Computer Science

Bengaluru, India

June 2017 – May 2021

- **GPA:** 8.78/10.

PROJECTS

AI Daily Stock Analyzer

Automated Market Research Pipeline | 🐙 [GitHub](#)

Sep 2025 – Nov 2025

Python, LLMs, RSS, HTML

- Engineered a daily automated pipeline to iterate through listed Indian market stocks, fetching the latest 10 news articles per stock from various RSS feeds.
- Integrated an LLM to process textual news data and assign a quantified buy rating (out of 10), augmented with stock-specific technical indicators.
- Built a reporting module to generate a comprehensive HTML summary report, distributed seamlessly via automated daily morning emails.

Rideshare - DBaaS

Database as a Service | 🐙 [GitHub](#)

Mar 2020 – May 2020

Python, Docker, Postgres

- Designed and implemented a scalable, highly available Database as a Service (DBaaS) model for a Rideshare application.
- Built two microservices: Users Service and Rides Service to manage respective data.
- Utilized Docker for containerization and deployment, RabbitMQ for messaging, and Zookeeper for distributed coordination.

TECHNICAL SKILLS

Programming Languages: Java, C/C++, Golang, Python, JavaScript, SQL

Technologies: Spring Boot, Azure SQL, Kubernetes, AWS, GCP, Docker, Kafka, Elasticsearch, Apache Spark

Development Tools: Git, Jenkins, Cursor, Claude Code, Agile
