PROFESSIONAL EXPERIENCE

Coinbase

Software Engineer

Mar 2025 – Present

Bengaluru, India

- Built and maintained **FORT**, a company-wide distributed test orchestration platform in Golang for gRPC/HTTP services, featuring a scheduler, **Temporal**-based workflow orchestrator, and worker-queue architecture, adopted by **750 of 1,300** gRPC repos and reducing production incidents by **45%** across the Consumer Organization within Coinbase.
- Developed a prompt-driven **QA AI Agent** integrated with FORT via a plugin, enabling test authors to define natural-language test objectives (e.g., localization audits) that autonomously launch BrowserStack sessions, navigate web pages, and detect issues, reducing external QA costs by **40%**.
- Engineered a **gRPC Diff Tester** as a FORT plugin where teams define endpoints and inputs via YAML configs; the plugin invokes both dev and staging environments, compares responses, and generates HTML diff reports, proactively catching **500+** breaking changes across Coinbase in 2025.
- Created a **Test Generation MCP Server** that auto-discovers gRPC methods via server reflection using internally minted JWT tokens, and scaffolds test cases automatically, reducing test authoring time by **55%**.
- Managed on-call for FORT and automated daily triage by building an **n8n pipeline** that fetches unhealthy Datadog monitors, performs AI-driven root cause analysis via LLM nodes integrated with Datadog and Sourcegraph MCPs, and generates a Google Doc with per-monitor RCA and confidence scores.

Walmart Global Tech India

Software Engineer 3

Jul 2021 – Mar 2025

Bengaluru, India

- Designed an End-to-End Ordering System for Walmart Store Remodels, facilitating remodeling across **5,000+ stores** in the US and achieving cost savings of approximately **\$27M** annually for international operations.
- Built a generic, schema-aware search framework for MSSQL Server enabling dynamic queries across any column and table, adopted across **8 microservices** spanning **50+ tables** and reducing ad-hoc query development effort by **30%**.
- Implemented Auto Secret Rotation for MSSQL servers, saving **15 days** of manual effort per team annually and eliminating **10 minutes** of downtime per microservice per year, achieving zero-downtime secret rotations.
- Received Annual Excellence Award twice (2022 and 2025) for mentoring engineers and significant contributions to customers.

Walmart Global Tech India

Software Engineer Intern

Jan 2021 – Jun 2021

Bengaluru, India

- Developed and optimized Apache Spark jobs for large-scale data processing on Google Cloud Dataproc clusters.
- Collaborated with distributed cross-functional teams to implement ETL workflows for business-critical analytics.

EDUCATION

PES University

B.Tech in Computer Science | GPA: 8.78/10

Bengaluru, India

June 2017 – May 2021

PROJECTS

AI Daily Stock Analyzer

Automated Market Research Pipeline | [GitHub](#)

Sep 2025 – Nov 2025

Python, LLMs, RSS, HTML

- Engineered a daily automated pipeline scanning listed Indian equities, fetching the latest news via RSS feeds, and leveraging an LLM to assign quantified buy ratings augmented with stock-specific technical indicators.
- Built a reporting module to generate comprehensive HTML summary reports, distributed seamlessly via automated daily morning emails.

TECHNICAL SKILLS

Programming Languages: Java, C/C++, Golang, Python, JavaScript, SQL

Technologies: Spring Boot, gRPC, PostgreSQL, Azure SQL, Kubernetes, AWS, GCP, Kafka, Elasticsearch, BrowserStack, Temporal, React

Development Tools: Git, Cursor, Claude Code
